10.2 Troubleshooting at power on ..... 64
10.3 Alarm Display ..... 65 LECSS Series / Driver Safety Instructions
These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger."
They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) ${ }^{\left.{ }^{+1}\right)}$, and other safety regulations.
*1) ISO 4414: Pneumatic fluid power -- General rules relating to systems.
ISO 4413: Hydraulic fluid power -- General rules relating to systems.
IEC 60204-1: Safety of machinery -- Electrical equipment of machines .(Part 1: General requirements)
ISO 10218: Manipulating industrial robots -Safety.

## Caution

 Warning Danger
## Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury. <br> Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury. <br> Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

## Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results.
The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product.
This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.
2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly.
The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.
3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1) Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2) Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3) An application which could have negative effects on people, property, or animals requiring special safety analysis.
4) Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Note that the $\triangle$ CAUTION level may lead to a serious consequence according to conditions. Please follow the instructions of both levels because they are important to personnel safety.

## LECSS Series / Driver Safety Instructions

## Caution

1.The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

## Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

## Limited warranty and Disclaimer

1.The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
Also, the product may have specified durability, running distance or replacement parts.
Pleaseconsult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.
*2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

## Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are govemed by the relevant security laws and regulation of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules goveming that export are known and followed.

## Introduction

It is recommended that the operator read the operation manual for LECSS prior to use. For the handling and details of other equipment, please refer to the operation manual for used equipment.

Check that the main circuit power supply (AC100V/AC200V) and controller circuit power supply (AC100V/AC200V) are correctly wired.
For wiring, please refer to section 3.1 of LECSS Operation Manual and section 3 of LECSS Operation Manual (Simplified edition).

Configure EM1 (Forced Stop) to be activated on power up. (Automatic ON by set parameter) Please refer to section 6.3.5 of this manual for details.

When setup software (MR Configurator2 ${ }^{\text {TM }}$ ) is used, the LECSS model selection is required.
Select 'MR-J3-B' through "Model" - "New" and "Project".

## 1. Configuration

Minimum equipment and wiring requirements to get started

$$
\text { Ex) } 200 \text { V AC (*1) }
$$

Provided by customer

10
PLC (Positioning unit/Motion controller)

(*1)Refer to "LECSS Operation Manual", Chapter 3 if the power supply voltage is 100VAC.

| 1 | Driver | LECSS*** |
| :---: | :---: | :---: |
| 2 | Motor cable | LE-CSM-*** |
| 3 | Encoder cable | LE-CSE-*** |
| 4 | I/O connector | LE-CSNS |
|  | I/O cable | LEC-CSNS-1 |
| 5 | USB cable | LEC-MR-J3USB |
| 6 | Setup software (MR Configurator $2^{T M}$ ) | LEC-MRC2* |
| 7 | Main circuit power supply connector | CNP1 (Accessory) |
| 8 | Control circuit power supply connector | CNP2 (Accessory) |
| 9 | Motor connector | CNP3 (Accessory) |
| 10 | Battery | LEC-MR-J3BAT (a bundled item) <br> It is unnecessary when using it with the incremental system. |
| 11 | SSCNETIII optical cable | LE-CSS-* |

Note) The lock cable option is not shown on this drawing. Refer to the "LECSS Operation Manual" for details.

## 2. Procedure before operation

### 2.1 Flow chart

## 3. Wiring

### 3.1 Wiring for power supply

Connect the actuator and driver power supply. This wiring diagram is common for all modes.

## (1) LECSS (Absolute encoder)

EX.) Power supply is AC200V single phase

[1] Power supply input terminals, $L_{1}, L_{2}$ : Provide specified power supply to input terminals $L_{1}$ and $L_{2}$.
[2] - Connect the motor input terminal ( $\mathrm{U}, \mathrm{V}, \mathrm{W}$ ) to the driver power terminal ( $\mathrm{U}, \mathrm{V}, \mathrm{W}$ ).

- Connect the motor ground terminal to the driver ground terminal.
- Connect the cable for the encoder.
[3] Connect the 200VAC to the power the internal power supply for the control circuit.
Refer to "LECSS Operation Manual", Chapter 3 for detailswhen the power supply voltage is 100VAC.

### 3.2 SSCNETIII cable wiring

## SSCNETIII cable wiring

(1) SSCNETIII cable connection between the driver and PLC

For CN1A connector, connect SSCNETIII cable connected to PC or PLC...etc in host side or driver. For CN1B connector, connect SSCNETIII cable connected to driver in lower side.
For CN1B connector of the final axis, use the cap provided with the driver to finalise the connection and prevent the connector from becoming dirty .

Do not allow the light beam (transparent and colorless) generated from CN1A • CN1B connector of driver or the end of SSCNETIII cable to be exposed directly into eye(s).
Allowing the light beam to come into direct contact with eye(s), will cause damage to eye(s).
(The light source of SSCNETIII complies with Class1 defined in JIS C6802 or IEC60825-1.)

## (2)Removing and inserting of the connector

(a) Inserting

While holding the tab on the SSCNETIII cable connector, insert the connector into CN1A - CN1B of driver until you hear the click.
If the end face of optical code tip is dirty, optical transmission may be interrupted and may cause malfunctions.
If the tip becomes dirty, wipe with a bonded textile, etc.
Do not use a solvent such as alcohol.

(b) Removal

Whilest holding the tab on the SSCNETIII cable connector, remove the connector.
Once the SSCNETIII cable has been removed from the driver, be sure to place the cap on the connector end of driver to prevent it from becoming dirty.
For SSCNETIII cable, attach the tube for protection of the optical code's end face on the end of connector.

### 3.3 I/O signal connection

The example of connecting driver's I/O signal is shown.

### 3.3.1 Connection example (Sink I/O interfaces)

The example of connecting driver's I/O signal is shown.Connect wires if necessary.

Refer to "LECSS Operation Manual",section 3.2 for wiring details.
Refer to "LECSS Operation Manual",section 3.5 for input/output signal details.

### 3.3.2 Source I/O interfaces

The driver can be configured for, source type I/O interfac. In this case, all DI-1 input signals and DO-1 output signals are of source type. Perform wiring according to the following interfaces.
(1) Digital input interface DI-1

(2) Digital output interface DO-1

A maximum of 2.6 V voltage drop occurs in the driver.

Note. If the voltage drop (maximum of 2.6 V ) interferes with the relay operation, apply high voltage (up to 26.4 V ) from external source.

## 4. Axis No. settings

Set the control axis No. by the rotary switch.

## POINT

- The control axis number set to rotary axis setting switch (SW1) should be the same as the one set to the servo system PC or PLC...etc.
- Use a flat blade screwdriver with the width of 2.1 to 2.3 mm and the end thickness of 0.6 to 0.7 mm to change the rotary switch setting.
- If the test operation mode is selected using the test operation change switch (SW2-1), SSCNETIII communication at all points after the driver is disconnected.

Use the rotary axis setting switch (SW1) to set the control axis number for the servo. If the same numbers are set to different control axes in a single communication system, the system will not operate properly. The control axes may be set independently of the SSCNET III cable connection sequence.

Rotary axis setting switch (SW1)

Test operation select switch (SW2-1)
Set the test operation select switch to the "Up" Position, when performing the test operation mode by using set up software (MR Configurator ${ }^{\text {TM }}$ )
(Note) This table indicates the status when the switch is set to "Down". (Default)

| Spare (SW2-2) | Rotary axis setting switch (SW1) | Description | Display |
| :---: | :---: | :---: | :---: |
| Down (Be sure to set to the "Down" position.) | 0 | Axis No. 1 | 01 |
|  | 1 | Axis No. 2 | 02 |
|  | 2 | Axis No. 3 | 03 |
|  | 3 | Axis No. 4 | 04 |
|  | 4 | Axis No. 5 | 05 |
|  | 5 | Axis No. 6 | 06 |
|  | 6 | Axis No. 7 | 07 |
|  | 7 | Axis No. 8 | 08 |
|  | 8 | Axis No. 9 | 09 |
|  | 9 | Axis No. 10 | 10 |
|  | A | Axis No. 11 | 11 |
|  | B | Axis No. 12 | 12 |
|  | C | Axis No. 13 | 13 |
|  | D | Axis No. 14 | 14 |
|  | E | Axis No. 15 | 15 |
|  | F | Axis No. 16 | 16 |

## 5. Parameter list (Driver side)

Parameters require setting. If necessary, please set the parameters.
Refer to "LECSS Operation Manual",chapter 5 and "LECSS Operation Manual(Simplified Edition)",section 5.3 for details.

Refer to "LECSS Operation Manual",chapter 5 for parameters which are not mentioned in this clause.
Setup software (MR Configurator2 ${ }^{\text {TM }}$ :LEC-MRC2E) is necessary for the setting of parameter.
${ }^{*} 1$ Setup software version 1.52 E or above is required.
*2 The setup software (MR Configurator2TM : LEC-MRC2E) must be purchased as an additional item.
*3 The USB cable (LEC-MR-J3USB) must be purchased as an additional item.
(1) Basic setting parameters (No.PAㅁ $\square$ )

| No. | Symbol | Name | Initial value | Unit |
| :---: | :---: | :--- | :--- | :--- |
| PA01 | STY | For manufacturer setting | 0000h |  |
| PA03 | ABS | Absolute position detection system | (Note 1) | 0000 h |
| PA04 | AOP1 | Function selection A-1 | (Note 1) | 0000 h |
| PA08 | ATU | Auto tuning mode | (Note 1) | 00001 h |
| PA09 | RSP | Auto tuning response | (Note 1) | 12 |
| PA10 | INP | In-position range | (Note 1) | 100 |
| PA14 | POL | Rotation direction selection | pulse |  |

(2) Extension setting parameters (No.PC $\square \square)$

| No. | Symbol | Name | Initial value | Unit |
| :---: | :---: | :---: | :---: | :---: |
| PC17 | COP4 | Function selection C-4 | 0000 h |  |

(3) I/O setting parameters (No.PDø ם)

Change the assignment of the output signal.
Refer to "LECSS Operation Manual", Section 5.4 for details.
(Note 1)Parameters that can be set by the upstream equipment.
During PLC operation, parameters are stored in the QD75MH module and transmitted to the LECSS. Refer to PLC manual for checking the setting method of parameters.

## 6. Parameter Configuration using Setup software (MR Configurator2 ${ }^{\text {TM }}$ )

This section describes the configuration procedure for main parameters using the setup software (MR Configurator2 ${ }^{\text {TM }}$ : LEC-MRC2E). See chapter 5 of the "LECSS Operation Manual" for parameter details.

### 6.1 Setup software (MR Configurator2 ${ }^{\text {TM }}$ )

*1 Setup software version 1.52E or above is required.
*2 The setup software (MR Configurator2 ${ }^{\text {TM }}$ :LEC-MRC2E) must be purchased as an additional item.
*3 The USB cable (LEC-MR-J3USB) must be purchased as an additional item.

### 6.1.1 Installation Method

Perform installation according to the "MR Configurator2TM instruction manual" (Manual/ib0300160*.pdf) contained on the setup software (MR Configurator2 ${ }^{\text {TM }}$ ) CD-ROM. The "MR Configurator2 ${ }^{\text {TM }}$ " software will be added to the PC.

### 6.2 Basic driver set-up for Initial Test Drive

Switch on the main circuit power supply (AC100V/AC200V) and controller circuit power supply (AC100V/AC200V) to the LECSS driver.

Please check the wiring and configuration when the display on the driver is not displayed as follows.

Waiting for servo system controller power to switch ON(SSCNETIII communication)

When the driver display flashes as shown below,the EM1 (Forced stop) needs checking. There is a requirement for wiring of EM1 signal, and it need to be switched ON (state of EM1 release is (operational))

If you turn on the power supply for the first time, refer to "LECSS Operation Manual", chapter 4.

### 6.2.1 Start up the Setup software (MR Configurator2 ${ }^{\mathrm{TM}}$ )

(1) Connect the PC and LECSS using the USB cable.
(2) Turn on the power of the LECSS.
(3) Start application "MR Configurator2".

Once the application starts, the screen displayed will be as shown.

### 6.2.2 "System Settings"

(1) From "Project" menu select "New", the "New project" window will be displayed.

### 6.2.3 Model Selection

(1) The Mitsubishi Electric Corporation series will be displayed in the model selection list. Please select MR-J3-B if using the LECSS.
(2) Please select "servo amplifier connection USB" as the communication device.
(3) Click OK.
(4) Click OK.
(1)

### 6.2.4 Driver ON LINE Check

Check that the driver is enabled (ON LINE).

Check that the "ON LINE/OFF LINE" icon is displayed "
It is OFF LINE when displayed as "

* For OFF Line, and there is no communication between PC and LECSS driver. Confirm the following points.
- Is driver's power supply turnned on?
- Is the PC and LECSS driver connected with the USB cable?
- Is the USB driver installed on the PC?
- Is the USB driver which is compliant to Windows version installed?

### 6.2.5 Help Function

By selecting "MR Configurator2 Help" in "Help" from any window of the setup software, a "HELP" screen will be shown.

### 6.3 Parameter setting (Driver side)

The setup software (MR Configurator2TM:LEC-MRC2E) is required to set the parameters.
*1 Setup software version 1.52 E or above is required.
*2 The setup software (MR Configurator2TM:LEC-MRC2E) must be purchased as an additional item.
*3 The USB cable (LEC-MR-J3USB) must be purchased as an additional item.

## POINT

- When the driver is connected with the servo system controller, the parameters are set to the values of the servo system controller. Switching power off, then on makes the values set on the set up software (MR Configurator2 ${ }^{\text {TM }}$ ) invalid and the servo system controller values valid.
- Setting may not be made to some parameters and ranges depending on the model or version of the servo system controller. For details, refer to the servo system controller user's manual.
- Parameter whose symbol is preceded by *is made valid with the following conditions.
*: Set the parameter value, switch power off once after setting, and then switch it on again, or perform the driver reset.
**: Set the parameter value, switch power off once, and then switch it on again.
- Never change parameters for manufacturer setting.
(1) From the "Parameter" menu select "Parameter Setting", the "parameter setting" window will open.
(2) The explanation of the parameter item is displayed in "MR2 Help".
(When it is not displayed, from the "View" menu select "Docking window" - "Docking Help".)

(3) When each item of "List display" is clicked, a "Parameter list" screen is displayed. When "Basic" is selected, the following is shown.

| Basic |  |  | Selected Items Write Sing |  | xis Write |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. | Abbr. | Name | Units | Setting range | Axis 1 |
| PA01 | ${ }^{* s}$ STY | Control mode |  | 0000-1F60 | 0000 |
| PA02 | **REG | Regenerative option |  | 0000-73FF | 0000 |
| PA03 | *ABS | Absolute position detection system |  | 0000-0001 | 0001 |
| PA04 | *AOP1 | Function selection A-1 |  | 0000-F230 | 0100 |
| PA05 | ${ }^{*}$ FBP | For manufacturer setting |  | 0-65535 | 0 |
| PA06 | ${ }^{*} \mathrm{CMXX}$ | For manufacturer setting |  | 1-32767 | 1 |
| PA07 | ${ }^{*} \mathrm{CDV}$ | For manufacturer setting |  | 1-32767 | 1 |
| PA08 | ATU | Auto tuning mode |  | 0000-0003 | 0001 |
| PA09 | RSP | Auto tuning response |  | 1-32 | 12 |
| PA10 | INP | In-position range | pulse | 0-65535 | 100 |
| PA11 | TLP | For manufacturer setting | \% | 0.0-1000.0 | 1000.0 |
| PA12 | TLN | For manufacturer setting | \% | 0.0-1000.0 | 1000.0 |
| PA13 |  | For manufacturer setting |  | 0000-0000 | 0000 |
| PA14 | *POL | Rotation direction selection |  | 0-1 | 0 |
| PA15 | *ENR | Encoder output pulse | pulse/rev | 1-65535 | 4000 |
| PA16 | *ENR2 | For manufacturer setting |  | 0-65535 | 0 |
| PA17 | ${ }^{* * M S R}$ | For manufacturer setting |  | 0000-FFFF | 0000 |
| PA18 | ${ }^{* *}{ }^{*}$ MTY | For manufacturer setting |  | 0000-FFFF | 0000 |
| PA19 | *BLK | Parameter block |  | 0000-FFFF | 000C |

Refer to"LECSS Operation Manual", chapter 5 for details of each parameter.

### 6.3.1 Change of parameter block

To enable settings for all parameters.
(1) Select "Basic" tab and change the value of "PA19" to " 000 C ".
(2) Click on the "PA19" row and click "Selected Items Write".
(3) Cycle the for the parameters to be enabled.
(2)

(4) Please click "Read".

When changing each parameter, note the following points.
Note1) Some of the parameters, there is "Enable once on again turning the power OFF after setting". (If you do not cycle the power., the data in the driver is not altered.)
Note2) "Selected Items Write": - the parameter values of the corresponding frame is written to the driver. "Single Axis Write": All of the parameters are written to the driver.
Note3) "For manufacturer setting" parameter, do not change. If you change by mistake, The driver does not work properly.

### 6.3.2 Reading parameters

To read the parameters currently configured on the driver, please perform the "read" operation.
(1) From the View menu bar "parameter (A)" - please click on the "parameter setting (P)". "Parameter Settings" screen will be displayed.
(2) Please click on "Read".

### 6.3.3 Parameter setting method

Please set the parameters for each actuator.
Refer to "LECSS Operation Manual",chapter 5 for details of each parameter.
Refer to"LECSS Operation Manual (Simplified Edition)",section 6.3.4 for details of the parameters recommended values for each actuator.

Setting example of the Regenerative option (PA02) (in the case of setting to "LEC-MR-RB-032")
(1) Set the parameters of the PA02 to "0002" in the "Basic" tab.
(2) Click on the "Single Axis Write" button.
(3) Turn the power OFF and ON again. Parameter is enabled.

### 6.3.4 The recommended parameters for each actuator

The recommended parameters for each actuator.
Refer to "LECSS Operation Manual", section 5 for details.
Recommended Parameter Values [LEF]

| Series |  |  | LEFS25 |  |  | LEFS32 |  |  | LEFS40 |  |  |

*2 A mechanical resonance may occur depending on the configuration or the mounting orientation of the transferred object. Please change the parameter in the initial setting.
*3 When the motor mounting position is right side parallel (LEY*R / LEYG*R) or left side parallel (LEY*L/ LEYG*L), the rotation direction selection is $0(+:$ Counter motors side).

* For LECSS, please set the electronic gear with PC, PLC etc. in your application.

### 6.3.5 Forced stop input selection

If the product is used with forced stop (EM1), set the parameter [PA04] to "0000".
Forced stop (EM1) must be ON to start the motor.

| Parameter |  |  | Initial value | Unit | Setting range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. | Symbol | Name |  |  | Refer to the text. |

## POINT

- This parameter is made valid when power is switched off, then on after setting, or when the driver reset has been performed.

The servo forced stop function is avoidable.

When not using the forced stop (EM1) of driver, set the selection of servo forced stop to invalid (미 ロ). At this time, the forced stop (EM1) automatically turns on inside the driver.

EX.) In order to nullify servo forced stop.
[PA04] $=0100$.
(1) Set the "PA04" to "0100" in the "Basic" tab.
(2) Click on the "Single Axis Write" button.
(3) Turn the power OFF and ON again. Parameter is enabled.

| Basic |  |  | Selected Items Write |  | is Writ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. | Abbr. | Name | Units | Setying range | Axis 1 |
| PA01 | **STY | Control mode |  | 0000-1F60 | 0000 |
| PA02 | **REG | Regenerative option |  | 0000-73FF | 0000 |
| PA03 | *ABS | Absolute position detection system |  | 0000-0001 | 0001 |
| PA04 | *AOP1 | Function selection A-1 |  | 0000-F230 | 0100 |

### 6.3.6 Absolute position detection system

*If you use the absolute position detection system, set parameter: [PA03]=0001.
Refer to "LECSS Operation Manual", chapter 12 for details.

| Parameter |  |  | Initial value | Unit | Setting range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. | Symbol | Name |  |  |  |
| PA03 | ABS | Absolute position detection system | 0000 h |  | Refer to the text. |

## POINT

- This parameter is made valid when power is switched off, then on after setting, or when the driver reset has been performed.
- This parameter cannot be used in the speed control mode.

Set this parameter when using the absolute position detection system in the position control mode.
Parameter No.PA03

EX.) Use absolute position detection system
[PA03] = 0001
(1) Set the "PA03" to "0001" in the "Basic" tab.
(2) Click on the "Single Axis Write" button.
(3) Turn the power OFF and ON again. Parameter is enabled.

### 6.3.7 Verify of parameters

If you want to compare the "parameter" set in the setup software with the "Parameters set in the driver" / "Initial value parameter" / "Saved parameter", perform " Verify ".
(1) Click the "Verify" button on the [Parameter Setting] window. "Verfication Setting" screen will display.
(2) Please select the comparison target.

Amplifier : Compare with the parameters set in the driver.
Default : Compare with the initial value of the parameter.
File : Compare with saved parameters.
(3) Please click "OK" button. The verified result is displayed.

### 6.3.8 Parameter initialization

If you want to initialize parameters in the driver, please perform "Set to Default".
When you initialize the parameters, parameters can not be undone.
Please be sure to save the parameters in use.
(Refer to "LECSS Operation Manual (Simplified Edition)", section 6.7.1 for the parameter storage method.)
(1) Click the "Set To Default" button on the [Parameter Setting] window.
(2) Please click "Yes" button. "Parameter Block" screen will display.

Set the default using an editable parameter as the browsable range of the selected parameter block.
(3) Select the parameter block you want to initialize.
(4) Please click "OK" button.

Set the default using an editable parameter as the browsable range of the selected parameter block.
(5) Click on the "Single Axis Write" button.
(6) Turn the power OFF and ON again. Parameter is enabled.

| Basic |  |  | Selected Items Write |  | Single Axis Write |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. | Abbr. | Name | Units | Setting range | Axis 1 |
| PA01 | ${ }^{* * S T Y}$ | Control mode |  | 0000-1F60 | 0000 |
| PA02 | **REG | Regenerative option |  | 0000-73FF | 0000 |
| PA03 | ${ }^{*}$ ABS | Absolute position detection system |  | 0000-0001 | 0001 |

### 6.4 JOG Mode in the Setup Software

(1) The "JOG Mode" window can be displayed by selecting "Jog Mode" from the "Test Mode" menu in the setup software.
(2) Click "OK".
(When using this function, all external input signal operation will be diabled. If controlling using a PLC or other upper device, please turn off the power and reset the device before use.)

In the test operaton mode, if the test operation select switch (SW2-1) is in the "Down" position, the following warning is displayed.
Set the test operation select switch (SW2-1) to the "UP" position and make sure to turn the powor off before turing it on again.

When performing the test operation mode using the set-up software (MR Configurator2 ${ }^{T M}$ ), set the test operation select switch to the "UP" position.

Note. This table indicates the status when the switch is set to "Down". (Default)
For the test operation select switch (SW2-1), please refer to section 4 of LECSS Operation Manual (Simplified edition).

### 6.4.1 JOG Mode

(1) In order to prevent accidental impact at the end of the stroke, test the actuator operation at low speed. (If motor speed configuration or Acceleration/deceleration time are required, change the value.)
See "LECSS Operation Manual (Simplified Edition)",section 6.6.2 for motor speed configuration.
See "LECSS Operation Manual (Simplified Edition)",section 6.6.3 for Acceleration/deceleration time.
(2) Check actuator JOG operation using [Forward (CCW)] and [Reverse (CW)] in JOG mode.
(If operation is not correct , please check wiring and parameters)
When performing JOG operation in the setup software, the rotation direction of the actuator does not change if you change the setting of parameter PA14 (Rotation direction selection). The actuator moves in the direction of [Forward (CCW)] button and [Reverse (CW)] button.

| Item | Setting range | Unit | Description |
| :--- | :--- | :---: | :--- |
| Motorspeed | $0 \sim$ allowable actuator speed | $\mathrm{r} / \mathrm{min}$ | Set the command speed of the servo motor for execution of positioning <br> (motor rotations/minute). |
| Acceleration/de <br> celeration time | $0 \sim 50000$ | ms | Set the time until the servo motor reaches/stops to the rated speed (3000 <br> $\mathrm{r} / \mathrm{min})$. |

### 6.5 Changing Output Signal Allocation

Output signal assignment can be changed as appropriate from initial settings. There may be cases when changing the output signal assignment are required for actuator operation.
The allocation of the input signals cannot be changed in the LECSS, this must be changed by a higher level device.
Please be aware that any changes will alter signals entered as initial settings.
Please allocate the signals according to your system specification.
*When configuring PD**, please set parameter write inhibit [PA19] to 000C.
See "LECSS Operation Manual",section 5.4 for details.

### 6.5.1 Initial I/O Signal Allocation

The initial (Default) allocation of I/O signals is shown below.

## Fixation Input signal assignment (CN3-2, CN3-12, CN3-19, CN3-20) PD07 to PD09 Output signal assignment (CN3-9, CN3-13, CN3-15)

Input signal points (4) and initial assignment

| Device | Symbol | Connector <br> pin No. | I/O <br> division | Parameters <br> No. | Initial <br> value |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Forced stop | EM1 | CN3-20 | DI-1 | - <br> (Fixation) | - <br> (Fixation) |
| Device 1 | DI1 Note1 | CN3-2 | DI-1 | - <br> (Fixation) | - <br> (Fixation) |
| Device 2 | DI2 ${ }^{\text {Note1 }}$ | CN3-12 | DI-1 | - <br> (Fixation) | - <br> (Fixation) |
| Device 3 | DI3 Note1 | CN3-19 | DI-1 | - <br> (Fixation) | - <br> (Fixation) |

Devices can be assigned for DI1 DI2 DI3 with PC or PLC...etc setting. For devices that can be assigned, refer to the PC or PLC...etc instruction manual.

Output signal points (3) and initial assignment

| Device | Symbol | Connector <br> pin No. | I/O <br> division | Parameters <br> No. | Initial <br> value |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Electromagnetic <br> brake interlock | MBR | CN3-13 | DO-1 | PD07 | 0005 |
| In-position <br> (Positioning <br> completed) | INP | CN3-9 | DO-1 | PD08 | 0004 |
| Trouble | ALM | CN3-15 | DO-1 | PD09 | 0003 |

See "LECSS Operation Manual",section 3.5 for details regarding signals.
See "LECSS Operation Manual",section 5.4 for parameter configuration values.

### 6.5.2 Signal Allocation using Setup Software

(1) The "Parameter Setting" window will be displayed when "Parameter Setting" is selected from the "Parameter" menu in the setup software.
(2) Click the I/O tab.
(3) When changing the allocation of signals, parameters for "PD07" - "PD09" can be altered.

### 6.5.3 Allocation Examples

(1) Example of Ready (RD) Settings

Changing pins CN1-13 to Ready (RD).
Output signal points (3) and initial assignment

| Output signal points (3) and initial assignment |  |  |  |  |  | Device | Symbol | Connector pin No. | I/O <br> division | Parameters No. | Initial value |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Device | Symbol | Connector | I/O | Parameters | Initial |  |  |  |  |  |  |
| Electromagnetic brake interlock | MBR | CN3-13 | DO-1 | PD07 | 0005 | Ready | RD | CN3-13 | DO-1 | PD07 | $\begin{gathered} 0005 \rightarrow \\ 0002 \end{gathered}$ |
| $\begin{aligned} & \text { In-position } \\ & \text { (Positioning } \\ & \text { completed) } \\ & \hline \end{aligned}$ | INP | CN3-9 | DO-1 | PD08 | 0004 | in-position (Positioning completed) | ${ }^{\text {INF }}$ | CINS-9 | U0-1 | PU08 | 0004 |
| Trouble | ALM | CN3-15 | DO-1 | PD09 | 0003 | Trouble | ALM | CN3-15 | DO-1 | PD09 | 0003 |

(1) Changing PD07 from 0005 to $00 \underline{02}$
ut signal device selection 1

| Setting | Device | Setting | Device |
| :---: | :---: | :---: | :---: |
| 00 | Always OFF | OA | Always OFF (Note 2) |
| 01 | For manufacturer selinn( ${ }^{(N o t e} 3$ 3) | OB | For manufacturer setting (Note 3) |
| 02 | RD | 0 C | ZSP |
| 03 | ALM | OD | For manufacturer setting (Note 3) |
| 04 | INP (Note 1) | OE | For manufacturer setting (Note 3) |
| 05 | MBR | OF | CDPS |
| 06 | DB | 10 | For manufacturer setting (Note 3) |
| 07 | TLC | 11 | ABSV (Note 1) |
| 08 | WNG | 12 to 1F | For manufacturer setting (Note 3) |
| 09 | BWNG | 20 to 3F | For manufacturer setting (Note 3) |

Note 1. It becomes always OFF in speed control mode
2. It becomes SA in speed control mode
3. For manufacturer setting

Never change this setting
(2) Symbol allocation using the setup software: Changing pins CN1-13 to Ready (RD).
(1) Change PD07 from 0005 to 0002 in the $I / O$ tab.
(2) Select "Single Axis Write".
(3) Cycle the power for the parametersto be enabled.

* Please allocate pins CN1-13 separately.
* See "LECSS Operation Manual",section 5.4.2 for details on allocation of Output signals to pins CN1-9, CN1-13, CN3-15.

### 6.5.4 I/O Signal Allocation Check

The ON/OFF state (including layout check) and signal names allocated to CN3 can be checked. When parameters for PD07 - PD09 have been changed, it is necessary to confirm these are correctly assigned.
(1) From the Monitor menu of the Setup Software select I/OMonitor. The I/O Monitor window opens.

### 6.6 Positioning Mode in Setup Software

(1) From the Test Mode menu of the Setup Software select Positioning Mode. Select The Move Distance Unit
(2) Click OK.
(When using this function, external input signal operation will be disabled. When controlling from a PLC or upper level device, the power must be turned off and then on.)
(3) The Positioning Mode window opens.

in the test operaton mode, if the test operation select switch (SW2-1) is in the "Down" position, the following warning is displayed.
Set the test operation select switch (SW2-1) to the "UP" position and make sure to turn the powor off before turing it on again.

When performing the test operation mode using the set-up software (MR Configurator2 ${ }^{T M}$ ), set the test operation select switch to the "UP" position.

Test operation select switch (SW2-1)
Set the test operation select switch to the "Up" Position, when performing the test operation mode by usinf set up software (MR Confiqurator)

Note. This table indicates the status when the switch is set to "Down".
(Default)
For the test operation select switch(SW2-1), please refer to section 4 of LECSS Operation Manual (Simplified edition).

### 6.6.1 Positioning Mode

(1) In order to prevent accidental impact at the end of the stroke, operate the actuator at a low speed initially. When changing speed or movement, increase the values whilst checking operation (Change motorspeed, acceleration/deceleration time, movement distance values if required).
See "LECSS Operation Manual (Simplified Edition)",section 6.6.2 for motorspeed configuration.
See "LECSS Operation Manual (Simplified Edition)",section 6.6.3 for acceleration/deceleration time configuration.
See "LECSS Operation Manual (Simplified Edition)",section 6.6.4 for move distance configuration.
(2) Actuator positioning operates using [Forward (CCW)] and [Reverse (CW)].
(Check wiring and parameters if operation cannot be performed correctly).
When performing JOG operation in the setup software, the rotation direction of the actuator does not change if you change the setting of parameter PA14 (Rotation direction selection). The actuator moves in the direction of [Forward (CCW)] button and [Reverse (CW)] button.
"Actuator's movement distance per pulse" is obtained as below:

- actuator's movement distance per pulse (mm/pls) = actuator's lead (mm) ${ }^{* 1} / \mathrm{no}$. of encoder's pulses ${ }^{* 2}$ $=$ lead length $(\mathrm{mm}) /$ 4194304(pulse)
eg. In case of lead length of 10 mm , actuator's movement distance per pulse $[\mathrm{mm}]=10(\mathrm{~mm}) / 262144($ pulse $)$
$\fallingdotseq 0.00003810000024$ ( $\mathrm{mm} /$ pulse)
※1 Please refer to section 6.3.4 of LECSS Operation Manual (Simplified edition) for each actuator's lead.
※2 The number of encoder's pulses: 262144(pls)
LECSS cannot set an electronic gear ratio.
Therefore, in performance of "Test Operation (T)" - "Positioning Operation (I)" with the set-up software, "actuator's move distance per pulse" is set per pulse unit of the encoder.

| Item | Setting range | Unit | Description |
| :--- | :--- | :---: | :--- |
| Motorspeed | $\begin{array}{l}0 \sim \text { Allowed Speed for } \\ \text { each actuator }\end{array}$ | $\mathrm{r} / \mathrm{min}$ | $\begin{array}{l}\text { Set the command speed of the servo motor for execution of positioning } \\ (\text { Motor rotations/min). }\end{array}$ |
| $\begin{array}{l}\text { Acceleration/ } \\ \text { deceleration time }\end{array}$ | $0 \sim 50000$ | ms | Set the time until the servo motor reaches/stops to the rated speed (3000 r/min) |$\}$

### 6.6.2 Motor speed Configuration <Rotation Speed Configuration>

(1) Motorspeed (r/min) configuration.

* r/min (rpm): Indicated motor rotation speed (motor rotations/min)

Rotation speed must be between 0 and the allowable speed limit for each actuator. Please be aware that the actuator will not operate if this is set to 0 .

If the rotation speed is too low, this may cause vibration; check the actuator while changing settings.
Movement speed (mm/s) must be converted into rotation speed (r/min).
See below for the conversion formula.

Calculating motor speed conversion example using an actuator with a 20 mm lead and $500[\mathrm{~mm} / \mathrm{sec}$ ] speed.

The SHIFT key can be used for forced stop.
Torque limit from controller is ignored at the test operation,

### 6.6.3 Acceleration/deceleration Time Configuration

< Acceleration/deceleration Time Configuration>
(1) Acceleration/deceleration time (ms) configuration:

The acceleration/deceleration time sets the amount of time (ms) in which a prescribed number of rotations ( $3000[\mathrm{r} / \mathrm{min}]$ ) is reached.
The acceleration/deceleration time must be set to a value between 0 and the allowable acceleration/deceleration speed for each actuator.

The acceleration/deceleration time must be converted from the acceleration/deceleration speed. See below for the conversion formula.

Calculating Acceleration/deceleration conversion example using an actuator with a 8 [ mm ] lead with an acceleration of $3000\left[\mathrm{~mm} / \mathrm{sec}^{2}\right]$.

## Speed at a rated motor rotation of 3000rpm

*Acceleration speed is measured in ms , so this must be calculated as $(\mathrm{s}) \times 1000$
Acceleration/deceleration time $(\mathrm{ms})=\{3000(\mathrm{r} / \mathrm{min}) \div 60(\mathrm{~S})\} \times 8(\mathrm{~mm}) \times 1000$ $3000\left(\mathrm{~mm} / \mathrm{s}^{2}\right)$

$$
\fallingdotseq 133(\mathrm{~ms})
$$

### 6.6.4 Movement distance Configuration and Operation < Movement distance Configuration>

(1) Set the movement distance [pulse]. Select a value within the stroke range.
(2) Actuator position will operate using [Forward (CCW)], [Reverse (CW)].

The position at which power is turned ON will be set as the home position, and the actuator will travel the amount set as movement distance (check wiring and parameters if operation is not performed correctly). When performing JOG operation in the setup software, the rotation direction of the actuator does not change if you change the setting of parameter PA14 (Rotation direction selection). The actuator moves in the direction of [Forward (CCW)] button and [Reverse (CW)] button.
"Actuator's movement distance per pulse" is obtained as below:

- actuator's movement distance per pulse (mm/pls) = actuator's lead (mm) ${ }^{* 1} / \mathrm{no}$. of encoder's pulses*2 $=$ lead length $(\mathrm{mm}) / 262144($ pulse $)$
eg. In case of lead length of 10 mm ,
actuator's movement distance per pulse $[\mathrm{mm}]=10(\mathrm{~mm}) / 262144$ (pulse)
$\fallingdotseq 0.0000381$ (mm / pulse)
※1 Please refer to section 6.3.4 of LECSS Operation Manual (Simplified edition) for each actuator's lead.
※2 The number of encoder's pulses: 262144(pls)
Travel distance (mm) must be converted to travel distance (pulse).
See below for the conversion formula.

To move the actuator of which lead is 10 mm for 100 mm :

```
move distance[pulse] = 100(mm)/ actuator's move distance per pulse[mm/pls]
    = 100(mm)/(10(mm) / 262144(pulse))
    \fallingdotseq 2621440(pulse)
```

* Ensure that the [Forward (CCW)] and [Reverse (CW)] driving directions are checked. If the driving direction is unclear, operate the actuator slowly with a small move distance while checking the driving direction.

### 6.7 Saving/Loading Parameters

### 6.7.1 Saving Parameters

(1) From the "Parameter Setting" window in the setup software, select "Save As".
(2) Please specify location to be saved.
(3) Please enter any file name.
(4) Click "Save".

Files Saved
.prm2
Settings files for parameters

* Note Always upload current parameters from the driver to the software before saving. (See "LECSS Operation Manual (Simplified Edition)",section 6.3.2 for uploading.)

### 6.7.2 To Load saved Parameters

(1) From the "Parameter Setting" window in the setup software, select "Open".
(2) Please specify location of the file
(3) Please select the file from which you wish to import parameters [.prm2].
(4) Click "Open".

Parameters will be loaded.

### 6.8 Saving/Loading Project

### 6.8.1 Saving Project

(1) From the "Project" menu in the setup software, select "Save As".
(2) Please specify location to be saved.
(3) Please enter any project name.
(4) Click "Save".

Project will be saved in the specified folder.
If you change the drive / path name, it will be saved in the "drive $¥$ path name $¥$ project name" folder you have changed.

* Note Always upload current parameters from the driver to the software before saving.
(See "LECSS Operation Manual (Simplified Edition)",section 6.3.2 for uploading.)

### 6.8.2 To Load saved Parameters

(1) From the "Project" menu in the setup software, select "Open".
(2) Please select the "drive $¥$ path name $¥$ project name" that you want to read parameters from.
(3) Click "Open".

Project will be loaded.

### 6.9 Acquisition of motion waveform with graph monitor

With the setup software (MR Configurator2 ${ }^{\text {TM }}$ : LEC-MRC2E) monitor graph function, the motion waveform during electric actuator operation can be obtained as described below.
(1) Click "Monitor" - "Graph" of Setup software to display "Graph" window.

### 6.9.1 Under the setting Tab: Setting of the items to display the graph

Set the items to display analogue and digital waveform, trigger conditions and time for the horizontal axis of the graph.
Click the [Setting] tab of the [Setting] window to set the items to display the waveform, trigger conditions and horizontal axis of the graph.
3 types analogue waveform (analogue 1 to 3 ) and 4 types of digital waveform (digital 1 to 4 ) can be set.

| Setting |  |  |  | c |
| :---: | :---: | :---: | :---: | :---: |
| Setting | Display Cursor |  |  |  |
| Separate Axis Setting Initialization |  |  |  |  |
| - Times |  |  |  |  |
| ms/div |  | 50 ms |  |  |
| Number of at 10 Div |  |  |  |  |
| Trigger |  |  |  |  |
| Axis |  | Axis 1 |  |  |
| Data |  | Not selected |  |  |
| Mode |  | Single |  |  |
| - Axis |  |  |  |  |
| Target axis Axis 1; |  |  |  |  |
| - Parameter |  |  |  |  |
| Auto reading ON |  |  |  |  |
| - Waveform |  |  |  |  |
| Analog 1 |  | Motor speed |  |  |
| Analog 2 |  | Torque |  |  |
| Analog 3 |  | Droop pulses (by 1 pls. |  |  |
| Digital 1 |  | INP |  |  |

| Digital 3 |  | Not selected |  |  |
| Digital 4 |  | Not se | ected |  |

(1) Time

Set the horizontal axis (time axis) of the graph.
For LECSS, set [ms/div] and [Number of collection Div] to the horizontal axis (time axis).
[ms/div] $\times$ [Number of collection Div] will be [Measurement time].

| - Times |
| :--- | :--- |
| $\mathrm{ms} / \mathrm{div}$ 50 ms <br> Number of cr 10 Div |

(1) Click " $\checkmark$ " of [ms/div] and set the DiV number. The unit ms of [Number of collection Div] is $1000 \mathrm{~ms}=1 \mathrm{~s}$.
(2) Click " $|\checkmark|$ " of [Number of collection Div] and set the time.

(2) Trigger
"Trigger" is a condition which decides the display timing of the graph.
If trigger conditions are not satisfied, waveform will not be displayed.
(1) Click " $(v$ " of [Data] to set the condition.
(In general, set the Motor speed.)

(3) "Level" / "Condition" / "Position" are displayed.
(1) Click " $\checkmark$ |" of "Level" / "Condition" to set the condition.

For Motor speed, when the operation direction is positive, "Level" should be100 and when the operation direction is negative, "Level" should be -100.
Align the setting of "Condition" to the operation direction too.
"Level" / "Condition" setting (For Motor speed)

| Operating direction | "Level" <br> $[\mathrm{r} / \mathrm{min}]$ | "Condition" |
| :---: | :---: | :---: |
| Positive direction operation | 100 | Startup |
| Negative direction operation | -100 | Fall |

"Position" should be 10\%.
(4) Waveform

Set the waveform data which will be displayed in the graph.
(1) Click " $\checkmark \checkmark$ " of each "Analog" or "Digital" and set the type of waveform to be displayed.

The analogue and digital waveforms that can be set with LECSS are shown below.

Analogue waveform

| No. | Name | Function | Unit | Note |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Motor speed | The motor speed is displayed. | 1r/min |  |
| 2 | Torque | The motor torque is displayed. | 0.1\% |  |
| 3 | Current command | The current command to be given to the motor is displayed. | 0.1\% |  |
| 4 | Command pulse frequency | The command pulse frequency is displayed. | $\begin{gathered} 1.125 \\ \text { kpulse/s } \\ \hline \end{gathered}$ |  |
| 5 | Command pulse frequency (by speed) | The command pulse frequency is converted into the motor speed and displayed. | 1r/min |  |
| 6 | Droop pulse (by 100 pulse) | The droop pulse on the deviation counter is displayed in units of 100pulse. The pulse count is displayed in encoder pulses. | 100pulse |  |
| 7 | Droop pulse (by 1 pulse) | The droop pulse on the deviation counter is displayed in units of 1 pulse. <br> (Note) Any area beyond the display range (-32768 pulses to 32767 pulses) is clamped and displayed in red. | 1 pulse |  |
| 8 | Speed command | The speed command to be given to the motor is displayed. | 1r/min |  |
| 9 | Bus voltage | The bus voltage of the driver amplifier is displayed. | 1V |  |
| 10 | Effective load ratio | The continuous effective load torque is displayed. The effective value for the last 15 seconds is displayed. | 0.1\% |  |
| 11 | Regenerative load ratio | The ratio of regenerative power to permissible regenerative power is displayed in \%. | 0.1\% |  |
| 12 | Within one-revolution position | The position is displayed in encoder pulses` to the accuracy of one revolution. | 16pulse |  |
| 13 | ABS counter | The move distance from the home position in the absolute position detection system is displayed in the multiple-revolution counter value of the absolute position encoder. | 1 rev |  |
| 14 | Load inertia moment ratio | The estimated ratio of the motor axis converted load inertia moment to the motor inertia moment is displayed. | 0.1times |  |
| No. | Name | Function | Unit | Note |
| :--- | :--- | :--- | :---: | :---: |
| 15 | Torque equivalent <br> to disturbance | The difference between the torque required driving <br> the motor and the actually required torque (torque <br> current value) is displayed in torque equivalent to <br> disturbance. | $0.1 \%$ |  |
| 16 | Overload alarm <br> margin | The margin until the load reaches the overload <br> (AL.50, AL.51) alarm level is displayed in \%. <br> An overload alarm will occur when margin is 0\%. | $0.1 \%$ |  |
| 17 | Excessive error <br> alarm margin | The margin until the error reaches the excessive <br> error (AL.52) alarm level is displayed in encoder <br> pulses. <br> An excessive error alarm will occur when margin is <br> zero pulses. | 16 pulse |  |
| 18 | Settling time | The settling time for position control is displayed. <br> The method for measuring the settling time can be <br> selected from the separate axis setting. | 1 ms |  |
| 19 | Overshoot amount | The overshoot amount for position control is <br> displayed in encoder pulses. <br> The method for measuring the overshoot amount can <br> be selected from the separate axis setting. | 1 pulse |  |
| 20 | Motor speed <br> (by $0.1 \mathrm{r} /$ min) | The motor speed is displayed. | $0.1 \mathrm{r} / \mathrm{min}$ | (Note 1) |
| 21 | Command pulse <br> frequency <br> (0.1r/min by speed) | The command pulse frequency is converted into the <br> motor speed and displayed. | $0.1 \mathrm{r} / \mathrm{min}$ | (Note 1) |
| 22 | Speed command <br> (by $0.1 \mathrm{r} /$ min) | The speed command to be given to the motor is <br> displayed. | $0.1 \mathrm{r} / \mathrm{min}$ | (Note 1) |
| 23 | Torque command | Control the torque at the torque control or stopper <br> control. | $0.1 \%$ | (Note 1) |
| 24 | Speed limit | Control sped at the torque control or stopper <br> control. | $1 \mathrm{r} / \mathrm{min}$ | (Note 1) |

Digital waveforms
CSON, PC, EMG, EM1, CDP, CSV3 (Note 1), D1, D2, D3, D4 (Note 2) RD, SA, ZSP, TLC, VLC, INP, WNG, ALM, OP, MBR, DB, BWNG, CDPS, ABSV, SSV3 (Note 1)
(Note 1) They will be supported in the driver of software version C7 or later.
(Note 2) D1, D2, D3 and D4 are for the manufacturer setting.
See "LECSS Operation Manual", section 3.5 for details of each digital waveform.

### 6.9.2 Trigger wait

When the "Start" button is clicked, the screen will be on stand-by.
When trigger conditions are satisfied during the trigger wait, waveforms can be captured and displayed.
Click the "Start" button every time measurement fresh capture is required.
(The advantage of this method of capturing the waveform is a waveform will not be updated in the case of an incorrect operation.)
(1) Click the "Start" button.

(2) Trigger wait is displayed.
(3) The acquisition of waveform will be canceled with "Stop" button.

### 6.9.3 Operation Instruction

When the PLC on the master side sends the operation command, the actuator will operate. When the trigger conditions in 6.9.1 (2) are satisfied, the operation waveforms can be captured.

When the time set in 6.9.1 (1) has passed after the acquisition start, the acquisition of the waveforms will complete and waveforms are displayed on the screen.
(1) When the "Scale Optimization" button is clicked, the vertical axis range is adjusted automatically.

### 6.9.4 Saving of waveform

After the waveform is displayed, it is possible to save the data in 3 ways.
(1) Click the "Save As" button.

Select the folder in which the step data is to be saved and save the data.
Waveform data file (extension: gpf2) will be prepared.
If the waveform condition needs to be checked, it can be displayed on the graph window.
(2) Click the "Save Image" button.

Select the folder in which the step data is to be saved and save the data.
An Image file (extension: jpg) will be prepared.
(3) Click the "Screen Copy" button.

Save the displayed waveform screen (print screen).

### 6.10 Display All Monitor List

The method how to obtain the electric actuator condition is described with the display all function of the setup software.
(1) Click "Monitor" - "Display All" of the setup software to display "Display All" window.
(2) The condition of each item is displayed. For off line of the setup software, [----] will be displayed.

(1)

The following items are displayed for LECSS.

| No. | Name | Function | Display range | Unit |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Cumulative feedback pulses | Feedback pulses from the motor encoder are counted and displayed. <br> When exceeding 999999999, it returns to zero. <br> Press the [Clear] button to reset the display value to 0 (zero). <br> Reverse rotation is indicated by a minus (-) sign. | $\begin{gathered} -999999999 \text { to } \\ 999999999 \end{gathered}$ | pulse |
| 2 | Motor speed | The motor speed is displayed. The value rounded off is displayed in $0.1 \mathrm{r} / \mathrm{min}$. | $\begin{gathered} -7200 \text { to } \\ 7200 \\ \hline \end{gathered}$ | r/min |
| 3 | Droop pulses | The number of droop pulses in the deviation counter is displayed. <br> Reverse rotation is indicated by a minus (-) sign. | $\begin{gathered} -999999999 \text { to } \\ 999999999 \end{gathered}$ | pulse |

| No. | Name | Function | Display range | Unit |
| :---: | :---: | :---: | :---: | :---: |
| 4 | Cumulative command pulses | The position command input pulses are counted and displayed. <br> Press the [Clear] button to reset the display value to zero. <br> Reverse rotation is indicated by a minus (-) sign. | $\begin{gathered} -999999999 ~ \\ 999999999 \end{gathered}$ | pulse |
| 5 | Command pulse frequency | The frequency of the position command input pulses is displayed. <br> Reverse rotation is indicated by a minus (-) sign. | $\begin{gathered} -999999999 \sim \\ 999999999 \end{gathered}$ | kpulse/ <br> s |
| 6 | Regenerative load ratio | The ratio of regenerative power to permissible regenerative power is displayed in \%. <br> As the permissible regenerative power depends on whether there is the regenerative brake option or not. Set Parameter PA02 correctly according to the regenerative brake option. <br> The guideline is $80 \%$ or less. | 0~100 | \% |
| 7 | Effective load ratio | The continuous effective load current is displayed. The effective value is displayed relative to the rated current of $100 \%$. | 0~300 | \% |
| 8 | Peak load ratio | The maximum torque is displayed. The highest value in the past 15 seconds is displayed relative to the rated torque of $100 \%$. | 0~400 | \% |
| 9 | Instantaneous torque | Torque that occurred instantaneously is displayed. The value of the torque that occurred is displayed in real time relative to the rated torque of $100 \%$. | 0~400 | \% |
| 10 | Within one-revolution position | Position within one-revolution is displayed in encoder pulses. <br> The value returns to 0 when it exceeds the maximum number of pulses. | 0~262143 | pulse |
| 11 | ABS counter | The move distance from the home position (0) in the absolute position detection system is displayed in terms of the absolute position detector's multi-revolution counter value. | $\underset{\underset{32767}{\sim}}{\sim}$ | rev |
| 12 | Load inertia moment ratio | The estimated ratio of the motor axis converted inertia moment to the motor inertia moment is displayed. | 0.0~300.0 | times |
| 13 | Bus voltage | The voltage (across $(\mathrm{P})-(\mathrm{N})$ ) of the main circuit converter is displayed. | 0~900 | V |

## 7. Parameter setting (PLC side)

The setting of PLC parameter in this operation manual is based on the MITSUBISHI ELECTRIC QD75MH positioning unit.
Parameter setting for the PLC side cannot be set at driver side.
Refer to the operation manual for used equipment when other positioning units or motion controllers are used.

### 7.1 SSCNET Setting

Pr. 100 Servo series
Be sure to set up servo driver.
Communication with servo driver is not started by the initial value " 0 " in default value.

| Item | Setting details | Setting Value | Default value | Setting value buffer memory address |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Axis 1 | Axis 2 | Axis 3 | Axis 4 |
| $\begin{array}{\|l} \hline \text { Pr. } 100 \\ \hline \text { Servo } \\ \text { serise } \end{array}$ | Used to select the servo driver series, whith is connected to the QD75MH. <br> POINT <br> Be sure to set up servo driver. Communication with servo driver is not started bythe initial value " 0 " in default value. (The LED indication of servo driver indicates "Ab") | 0 : Servo driver is not set 1: MR-J3-םB (LECSS-Sa) | 0 | 30100 | 30300 | 30500 | 30700 |

### 7.2 Movement amount per pulse

Set the unit. Set the number of pulses per rotation of the actuator lead or motor.

| Item |  | Setting value, setting range | Default value | Setting value buffer memory address. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | AXIS $1$ |  | $\begin{gathered} \text { AXIS } \\ 2 \end{gathered}$ | $\begin{gathered} \text { AXIS } \\ 3 \end{gathered}$ | AXIS |
| Pr. 1 <br> Unit setting |  |  | 0:mm | 3 | 0 | 150 | 300 | 450 |
|  |  | 1:inch |  |  |  |  |  |  |
|  |  | 2:degree |  |  |  |  |  |  |
|  |  | 3:PLS |  |  |  |  |  |  |
| Movement amount per pulse | Pr. 2 |  |  |  |  |  |  |  |
|  | Pulse number |  |  |  | 152 | 302 | 452 |  |
|  | per <br> rotation(AP) <br> (Unit: PLS) | (Note 1) | 20000 | 3 | 153 | 303 | 453 |  |
|  | Pr. 3 <br> Moving amount per rotation (AL) | The setting value range differs according to the "Pr. 1 Unit setting". | 20000 | $\begin{aligned} & 4 \\ & 5 \end{aligned}$ | $\begin{aligned} & 154 \\ & 155 \end{aligned}$ | $\begin{aligned} & 304 \\ & 305 \end{aligned}$ | $\begin{aligned} & 454 \\ & 455 \end{aligned}$ |  |
|  | Pr. 4 Unit magnification (AM) | 1:1 times | 1 | 1 | 151 | 301 | 451 |  |
|  |  | $\begin{gathered} 10: 10 \text { times } \\ \hline 100: 100 \text { times } \end{gathered}$ |  |  |  |  |  |  |
|  |  | 1000:1000 times |  |  |  |  |  |  |

(Note 1) LECSS sets [262144]
Pr. 1 Unit setting
Set the unit used for defining positioning operations. Choose from the following units depending on the type of control target : mm, inch, degree, or PLS. Different units can be defined for different axes(axis 1 to 4).
(Ex.) Different units (mm, inch, degree, and PLS) are applicable to different systems:
$\cdot \mathrm{mm}$, inch $\quad \mathrm{X}-\mathrm{Y}$ table, conveyor (Select mm or inch depending on the machine specifications)

- degree Rotating body (360 degrees/rotation)
- PLS X-Y table, conveyor
- When you change the unit, note that the values of other parameters and data will not be changed automatically.
After changing the unit, check if the parameter and data values are within the allowable range.
Set "degree" to exercise speed-position switching control (ABS mode)
Pr. 2 to Pr. 4 Electronic gear (Movement amount per pulse)
Mechanical system value used when the QD75MH performs positioning control.
The settings are made using Pr. 2 to Pr. 4
The electronic gear is expressed by the following equation.
Electronic No. of pulse per motor rotation(AP)
gear $=\quad$ Movement amount per rotation (AL) $\times$ Unit magnification (AM)
- When positioning has been performed, an error (mechanical system error) may be produced between the specified movement amount and the actual movement amount.
If this occurs, the error can be corrected using the Electronic gear.
Refer to the operation manual for used equipment for details.

Pr. 2 No. of pulse(s) per rotation(AP)
Set the number of pulses required for a complete rotation of the motor shaft.
If you are using the LECSS, set the value given as the "resolution per servo motor rotation" in the speed/position detector specifications.

> Number of pulses per rotation (AP) = Resolution per servo motor rotation (Note 1)
(Note 1) LECSS sets [262144]
Pr. 3 Movement amount per rotation (AL), Pr. 4 Unit magnification (AM)
The amount the workpiece moves with one motor rotation is determined by the mechanical structure. If the worm gear lead ( $\mu \mathrm{m} / \mathrm{rev}$ ) is PB, then

Movement amount per rotation $(\mathrm{AL})=\mathrm{PB}$.
However, the maximum value that can be set for this "movement amount per rotation (AL)" parameter is $20000000.0 \mu \mathrm{~m}(20 \mathrm{~m})$. Set the "movement amount per rotation (AL)" does not exceed this maximum value.

Movement amount per rotation $(A L)=P B \times 1 / n$

```
                                    = Movement amount per rotation (AL) \times Unit magnification (AM)
```

### 7.3 Stroke limit

Wiring for the stroke limit. If no wiring is used, set the parameter for signal logic selection.
Wiring of hardware stroke limit.
If the hardware stroke limit function is used, QD75MH/ driver upper limit/ lower stroke limit wiring should be configured as shown below.
(When Pr.22, "Input signal logic selection" is default value)

Note) The upper limit switch should be installed in the direction in which the "Current feed value" increases. The lower limit switch should be installed in the direction in which the "Current feed value" decreases.
If the install position of the upper/lower limit switches is inverted, the hardware stroke limit function will not operate properly. In addition, the servomotor will not stop.

When the logic of FLS and RLS is set to "positive logic" using Pr.22, "Input signal logic selection", positioning control can be performed, even if FLS and RLS are not wired.

### 7.4 Operating conditions

The following conditions must be satisfied in order to start operation.

(Note1) When the synchronous setting of the PLC CPU is made in the asynchronous mode, this must be provided as an interlock.
When it is made in the synchronous mode, no interlock must be provided in the program because the flag is turned ON when calculation is run on the PLC CPU.

Refer to the operation manual for the equipment used.

## 8. Home position return (PLC)

Home position returning in this operation manual is based on the MITSUBISHI ELECTRIC QD75MH positioning unit,.

- The original position returning parameter cannot be set at driver side. Refer to the operation manual for used equipment when other positioning units or motion controllers are used.

### 8.1 Returning to home position

Setting the home position returning parameter

| Item | Setting value, setting range | Default value | Setting value buffer memory address. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | AXIS 1 | AXIS 2 | AXIS 3 | AXIS 4 |
| Pr. 43 OPR method | 0:Near-point dog method | 0 | 70 | 220 | 370 | 520 |
|  | 4:Count method 1) |  |  |  |  |  |
|  | 5:Count method 2) |  |  |  |  |  |
|  | 6:Data set method |  |  |  |  |  |
| Pr. 44 OPR direction | 0:Positive direction (address increase direction) | 0 | 71 | 221 | 371 | 521 |

|  | 3:Pr. 27 Acceleration time 3 |  |  |  |  |  |
| Pr. 52 OPR deceleration time selection | $0:$ Pr. 10 Deceleration time 0 | 0 | 83 | 233 | 383 | 533 |
|  | 1:Pr. 28 Deceleration time 1 |  |  |  |  |  |
|  | 2:Pr. 29 Deceleration time 2 |  |  |  |  |  |
|  | 3:Pr. 30 Deceleration time 3 |  |  |  |  |  |
| Pr. 53 OP shift amount | The setting value range differs according to the "Pr. 1 Unit setting". | 0 | $\begin{aligned} & 84 \\ & 85 \end{aligned}$ | $\begin{aligned} & 234 \\ & 235 \end{aligned}$ | $\begin{aligned} & 384 \\ & 385 \end{aligned}$ | $\begin{aligned} & 534 \\ & 535 \end{aligned}$ |
| Pr. 54 OPR torque limit value | 1 to 1000(\%) | 300 | 86 | 236 | 386 | 536 |
| Pr. 55 Operation setting for incompletion of OPR | 0 : Positioning control is not executed. | 0 | 87 | 237 | 387 | 537 |
|  | 1: Positioning control is executed. |  |  |  |  |  |
| Pr. 56 Speed designation during OP shift | 0: OPR speed | 0 | 88 | 238 | 388 | 538 |
|  | 1: Creep speed |  |  |  |  |  |
| Pr. 57 Dwell time during OPR retry | $\begin{aligned} & 0 \text { to } 65535(\mathrm{~ms}) \\ & 0 \text { to } 32767 \text { : Set as a decimal } \\ & 32768 \text { to } 65535 \text { : Convert into hexadeciamal and set } \end{aligned}$ | 0 | 89 | 239 | 389 | 539 |

The methods of origin position return compatiable with the MITSUBISHI ELECTRIC QD75MH (Positioning Modules) are shown below.

The following table outlines four methods that can be used for the OPR method. (The OPR method is one of the variables set in the OPR parameters. It is set in Pr. 43 "OPR method" for basic OPR parameters.)

| Pr.43 <br> OPR method |  |
| :--- | :--- |
| Near-point dog <br> method | Deceleration is initiated by the OFF --> ON of the near-point dog. (Speed is reduced to Pr.47 "Creep speed"). <br> The operation stops once after the near-point dog turns ON and then OFF. Later the operation restarts and <br> then stops at the first zero signal to complete the OPR. <br> That position is specified as the origin position. |
| Count method (1) <br> (Note 1) | The deceleration starts by the OFF --> ON of the near-point dog and then moves at Pr.47 "Creep speed". <br> The machine stops once after moving the distance set in Pr.50 "Setting for the movement amount after <br> near-point dog ON" from the OFF --> ON position. Later the operation restarts and then stops at the first <br> zero signal to complete the machine OPR. |
| Count method (2) <br> (Note 1) | The deceleration starts by the OFF --> ON of the near-point dog, and the machine moves at Pr.47 "Creep speed" <br> The machine moves the distance set in the Pr.50 "Setting for the movement amount after near-point dog <br> ON" from the near-point dog OFF --> ON position, and stops at that position. The machine OPR is then <br> regarded as completed. |
| Data set method | The position where the machine OPR has been performed becomes an OP. <br> The current feed value and feed machine value are overwritten to the OP address. |

(Note 1): Near-point dog is used as an external input signal for the QD75MH module. The "Illegal near-point dog signal" (error code: 220) will occur if operator uses the external input signal from the servo amplifier.

## 9. Positioning operation (PLC)

Position in this operation manual is based on the MITSUBISHI ELECTRIC QD75MH positioning unit.
The position parameters cannot be set at driver side. Refer to the operation manual of the positioning modules or motion controllers used.

### 9.1 Setting of Operation data

Set operation parameters.

(Note 1) Refer to the operation manual for used equipment for details.

Da. 1 Operation pattern
The operation pattern designates whether positioning of a certain data No. is to be ended with just that data, or whether the positioning for the next data No. is to be carried out in succession.
[Operation pattern]
Positioning

- complete

Positioning continued

Independent positioning control
(Positioning complete)
Continuous positioning control

00: Positioning complete
Set to execute positioning to the designated address, and then complete positioning.
01: Continuous positioning control
Positioning is carried out successively in order of data Nos. with one start signal.
The operation halts at each position indicated by a positioning data.
11: Continuous path control
Positioning is carried out successively in order of data Nos. with one start signal.
The operation does not stop at each positioning data.

## Da. 2 Control system

Set the "control system" for carrying out positioning control.
Note) •When "JUMP instruction" is set for the control system, the "Da. 9 Dwell time" and "Da. 10 M code" setting details will differ.
-In cases when you selected "LOOP" as the control system, the "Da. 10 M code" should be set differently from other cases.

- If "degree" is set for "Pr. 1 Unit setting", circular interpolation control cannot be carried out.
(The "Circular interpolation not possible error" will occur when executed (error code: 535).)
Da. 3 Acceleration time No.
Set "acceleration time 0 to 3 " to use for the acceleration time during positioning.
0 : Use the value set in "Pr. 9 Acceleration time 0"
1: Use the value set in "Pr. 25 Acceleration time 1"
2: Use the value set in "Pr. 26 Acceleration time 2"
3: Use the value set in "Pr. 27 Acceleration time 3"
Da. 4 Deceleration time No.
Set "deceleration time 0 to 3 " to use for the deceleration time during positioning.
0 : Use the value set in "Pr. 10 Deceleration time 0"
1: Use the value set in "Pr. 28 Deceleration time 1"
2: Use the value set in "Pr. 29 Deceleration time 2"
3: Use the value set in "Pr. 30 Deceleration time 3"

Da. 5 Axis to be interpolated
Set the target axis (partner axis) for operation under the 2-axis interpolation control.
0 : Select the axis 1 as the target axis (partner axis)
1: Select the axis 2 as the target axis (partner axis)
2: Select the axis 3 as the target axis (partner axis)
3: Select the axis 4 as the target axis (partner axis)
(Note) • Do not specify the own axis number or any number except the above.
(If you do, the "Illegal interpolation description command error" will occur during the program execution (error code: 521)
-This item does not need to be set in 3 or 4-axis interpolation is selected.

Da. 6 Position address/movement amount
Set the address to be used as the target value for positioning control.
The setting value range differs according to the "Da. 2 Control system".
Absolute (ABS) system, current value changing
-The setting value (positioning address) for the ABS system and current value changing is set with an absolute address (address from OP).

## Da. 8 Command speed

Set the command speed for positioning.
(1) If the set command speed exceeds "Pr. 8 Speed limit value", positioning will be carried out at the speed limit value.
(2) If " -1 " is set as the command speed, the current speed (speed set for previous positioning data No.) will be used for positioning control. Use the current speed for uniform speed control, etc. If " -1 " is set as the command speed for continuing positioning data, and the speed is changed, the following speed will also change.
(Note that When starting positioning, if "-1" is set as the command speed for the positioning data that carries out positioning control first, the error "Command speed is not set" (error code: 503) will occur, and the positioning will not start.
Refer to the operation manual of the equipment used for details on the errors.

| Pr. 1 Setting value | Set value set by PLC program (Unit) |
| :--- | :--- |
| $0: \mathrm{mm}$ | 1 to $2000000000\left(\times 10^{-2} \mathrm{~mm} / \mathrm{min}\right)$ |
| 1:inch | 1 to $2000000000\left(\times 10^{-3} \mathrm{inch} / \mathrm{min}\right)$ |
| 2:degree | 1 to $2000000000\left(\times 10^{-3}\right.$ degree $\left./ \mathrm{min}\right) \quad$ (Note 1) |
| 3:PLS | 1 to $50000000(\mathrm{PLS} / \mathrm{s})$ |

(Note 1) The command speed range is 1 to $2000000000\left(\times 10^{-3}\right.$ degree/min), but it will changed to 1 to 2000000000 (x10-2degree/min) by setting Pr. 83 "Speed control $10 \times$ multiplier setting for degree axis" to valid.

Pr. 9 Acceleration time 0, Pr. 10 Deceleration time 0
Pr. 9 "Acceleration time 0" specifies the time for the speed to increase from zero to the Pr. 8 "speed limit value"
Pr. 10 "Acceleration speed 0 " specifies the time for the speed to decrease from the Pr. 8 "speed limit value" to zero.

1) If the positioning speed is set lower than the parameter-defined speed limit value, the actual acceleration/deceleration time will be relatively short. Thus, set the maximum positioning speed equal to or only a little lower than the parameter-defined speed limit value.
2) These settings are valid for OPR, positioning and JOG operations.
3) When the positioning involves interpolation, the acceleration/deceleration time defined for the reference axis is valid.

### 9.2 Movement MOD

Timing chart for positioning.
Timing chart to start "main positioning control"

Refer to the operation manual for used equipment for details.

## 10. Troubleshooting

### 10.1 Alarms and warning list

## POINT

- As soon as an alarm occurs, turn the Servo off and interrupt the main circuit power.

When a fault occurs during operation, the corresponding alarm or warning is displayed. If any alarm or warning has occurred, refer to "LECSS Operation Manual",section 8.2 or 8.3 and take the appropriate action. When an alarm occurs, the ALM turns OFF.
After its cause has been removed, the alarm can be deactivated in any of the methods marked $O$ in the alarm deactivation column. The alarm is automatically canceled after removing the cause of occurrence.

| , | Display | Name | Alarm deactivation |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Power $\mathrm{OFF} \rightarrow \mathrm{ON}$ | Error <br> reset | $\begin{aligned} & \text { CPU } \\ & \text { reset } \end{aligned}$ |
|  | 10 | Undervoltage | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 12 | Memory error 1 (RAM) | $\bigcirc$ |  |  |
|  | 13 | Clock error | $\bigcirc$ |  |  |
|  | 15 | Memory error 2 (EEP-ROM) | $\bigcirc$ |  |  |
|  | 16 | Encoder error 1 (At power on) | $\bigcirc$ |  |  |
|  | 17 | Board error | $\bigcirc$ | - |  |
|  | 19 | Memory error 3 (Flash-ROM) | $\bigcirc$ | - |  |
|  | 1A | Motor combination error | $\bigcirc$ |  |  |
|  | 20 | Encoder error 2 | $\bigcirc$ |  |  |
|  | 24 | Main circuit error | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 25 | Absolute position erase | $\bigcirc$ | $\bigcirc$ |  |
|  | 30 | Regenerative error | (Note 1) | (Note 1) | (Note 1) |
|  | 31 | Overspeed | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 32 | Overcurrent | $\bigcirc$ |  |  |
|  | 33 | Overvoltage | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 34 | Receive error 1 | $\bigcirc$ | (Note 2) | $\bigcirc$ |
|  | 35 | Command frequency error | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 36 | Receive error 2 | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 37 | Parameter error | $\bigcirc$ |  |  |
|  | 45 | Main circuit device overheat | (Note 1) | (Note 1) | (Note 1) |
|  | 46 | Servo motor overheat | (Note 1) | (Note 1) | (Note 1) |
|  | 47 | Cooling fan error | $\bigcirc$ |  |  |
|  | 50 | Overload 1 | (Note 1) | (Note 1) | (Note 1) |
|  | 51 | Overload 2 | (Note 1) | (Note 1) | (Note 1) |
|  | 52 | Error excessive | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 8A | USB communication time-out error | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 8E | USB communication error | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |
|  | 888 | Watchdog | $\bigcirc$ | ${ }^{\text {c }}$ |  |

| \} | Displa <br> y | Name |
| :---: | :---: | :---: |
|  | 92 | Battery cable disconnection warning |
|  | 96 | Home position setting warning |
|  | 9F | Battery warning |
|  | E0 | Excessive regeneration warning |
|  | E1 | Overload warning 1 |
|  | E3 | Absolute position counter warning |
|  | E4 | Parameter warning |
|  | E6 | Servo forced stop warning |
|  | E7 | Servo system controller forced stop warning |
|  | E8 | Cooling fan speed reduction warning |
|  | E9 | Main circuit off warning |
|  | EC | Overload warning 2 |
|  | ED | Output watt excess warning |

Note 1. Deactivate the alarm about 30 minutes of cooling time after removing the cause of occurrence.
2. In some servo system controller communication status, the alarm factor may not be removed.

### 10.2 Troubleshooting at power on

When the servo system does not start and a system error occurs when the servo system controller is turned on, it could be due to an improper boot of the driver. Check the display of the driver, and take actions according to this section.

| Display | Description | Cause | Checkpoint | Action |
| :---: | :--- | :--- | :--- | :--- |
| AA | Communication with the <br> servo system controller <br> has disconnected. | The power of the servo <br> system controller was <br> turned off. | Check the power of the servo <br> system controller. | Switch on the power of the servo <br> system controller. |
|  |  | An SSCNET III cable was <br> disconnected. | "AA" is displayed in the <br> corresponding axis and following <br> axes. | Replace the SSCNET III cable of <br> the corresponding axis. |
|  |  | Check if the connectors (CNIA, <br> CNIB) are unplugged. | Connect it correctly. |  |
|  |  | The power of the driver <br> was turned off. | "AA" is displayed in the <br> corresponding axis and following <br> axes. | Check the power of the driver. |

Note. \#\# indicates axis No.

### 10.3 Alarm Display

The contents of the alarm / warning that is currently occurring in the driver are displayed in the alarm display function of the setup software.
In addition, history is listed for alarms that occurred in the past.
(1) Click "Diagnosis" - "Alarm Display" of the setup software to display "Alarm Display" window.
(2) Alarms / warnings currently occurring in the driver display the contents. If no alarm / warning has occurred, it will not be displayed.
(3) Lists the history (Maximum 6 cases) of alarms that occurred in the past. (Warnings are not displayed.)
